

ADVANTAGES

- Able to be installed in any manufacturer's loose-fill filters
- ISO 10121-1:2014 tested media
- UL 900 classified for flammability
- Targets oxidizable acidic gases responsible for corrosion and a wide range of volatile organic gases and odours.
- Ideal for the removal of hydrogen sulfide, chlorine, low to medium molecular weight VOCs, and higher volatility organic contaminants
- Adsorption of the criteria air pollutants: ozone, nitrogen dioxide, and sulfur dioxide.

|                       |                                                                                                                                               |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| Application           | Targets acidic gases responsible for corrosion and a wide range of volatile organic gases and odours in a single stage when space is limited. |
| Media                 | Activated Carbon;Impregnated Activated Alumina                                                                                                |
| Max Temperature (°C)  | 40                                                                                                                                            |
| Min Temperature (°C)  | 10                                                                                                                                            |
| Relative Humidity max | 40%-70%                                                                                                                                       |
| Installation Options  | All loose-fill molecular air filters.                                                                                                         |
